

Transform your show with INTERACTIVE LIGHTING!

Gantom Torch IR Controlled Flashlight

Your guests may think the Gantom Torch is a normal flashlight for your lights-off event but little do they know that YOU are in control of their experience! Turn off their Torch in a moment of suspense, or turn on the integrated force feedback motor to give them an unexpected startle!

BlinkFX MiniEmitters installed throughout your show will reliably control the Gantom Torch as your guests walk through. Forget about clumsy remote controls that rely on actor timing, the Gantom Torch requires no user input after it's set up.

Take your show to the next level by offering your guests something they have never experienced before!

*Requires 18650 rechargeable battery, available from online retailers

BlinkFX MiniEmitter DMX Controlled IR Emitter

These IR emitters are installed into each scene where you want to control the Gantom Torch or other BlinkFX compatible devices. No DMX knowledge is required for setup using our free DMX Programmer app. Just connect your mobile device to the MiniEmitter and select the effect for each scene.

With a little DMX knowledge, you can easily make the Gantom Torch give force feedback to your guests with the built in "rumble" synced to the scares in your show!

DMX Programmer App
