Did you say Dimming LED?

Over the years our number one customer request was an LED lamp that would switch between a red and white output and allow dimming control. We are happy to announce the availability of our Littlite Colorfade™ dimmer for use with Littlite LED gooseneck lights.

The Littlite Colorfade dimmer provides smooth dimming through the red mode, transitioning into the white mode allowing the user to choose their preferred blend of red and white light for their lighting applications.

PRODUCT IMPROVEMENTS

The Colorfade Dimmer is available as a separate accessory (Model DM-LED) and will be incorporated on our RL-LED Ralite products and LA-LED LECTERN Assemblies effective Nov. 1st.

Please note that the DM-LED will not fit in our L-Series lampsets and will not work with our standard incandescent and halogen products.
